

## Post-Simulation Student Reflection-Practical Nursing

Date: \_\_\_\_\_ Name: \_\_\_\_\_

Please take a few minutes to complete the following questions, explaining your clinical reasoning, critical thinking, and reflection about the simulation experience. When completed we will debrief and reflect the simulation experience as a group.

<b>Information Technology:</b> How did you research information prior to or during the simulation, how did you use information or technology in this experience?		
<b>Managing Care of the Individual:</b> How did you manage the care of the patient(s) in this simulation? (May include time management, prioritization, assigning tasks, monitoring, and more.)		
<b>Evidence-Based Nursing Judgment/Care:</b> What choices did you make based on best practice or current nursing knowledge? Think of the Tanner model and describe some clinical reasoning and nursing judgement in each column.		
<b>NOTICE</b> <small>(Focused assessments? Signs/symptoms?)</small>	<b>INTERPRET</b>	<b>RESPOND</b> <small>(Changes reported, to whom, pt. response to interventions, what was the care plan, changes made?)</small>
<b>Patient Relationship Centered Care:</b> How did you develop and maintain a therapeutic relationship with the individual(s) in this simulated care experience? What communication techniques were effective? Was there anything ineffective that you would change? How did your care show a focus on the patient?		

## Post-Simulation Student Reflection-Practical Nursing

<b>Professional Integrity and Behavior:</b> How did you exhibit concepts such as professionalism, ethics, and accountability in your words and actions? Were there any issues with integrity or behavior that should be addressed?
<b>Quality Improvement:</b> What aspects of the scenario today could be part of quality improvement, or could improve the patient experience in this situation? What would the PN's role be in it?
<b>Safety:</b> Were there any safety concerns throughout the scenario? What risks were there to the patient or the nurse? Did you do anything to make your patient safe?
<b>Teamwork and Collaboration:</b> What role did you have in a team today? How did you collaborate with your team, including the patient, for the best care possible? What other health care team members might you need in this situation to provide quality patient care?
<b>Other thoughts:</b>
