Use of an Unfolding OB Case while Implementing Multi- Modalities

Learning Objectives

- * During this webinar you will learn how to use unfolding cases in your simulation events.
- * Learn to implement use of simple multiple modalities when you don't have a high-end simulator.

Disclosures

No affiliation with any companies

Discuss some products I use

Current OB Simulation modality? Select that all apply

1. High-fidelity manikin, ex: Noelle , Victoria
2. Task trainer: Prompt, Momma Natalie
3. Full Size manikin
4. SP (Standardized patient)

Have you used a unfolding case

- * Yes
- * No

Lack of OB clinical experiences/sites

- * Low Censur
- * Competition for placement space with other schools
- * Inconsistency with experiences
- * Large group
- * What other issues are you experiencing?

Evolving Scenario

- * Post Partum Hemorrhage
- * Process of Labor and Delivery looked around QSEN , North Carolina (pre-eclampsia)
- * Collaboration with content expert
- * Needs Assessment: Normal Process plus the most common complication

Bailey

- * Stage 1: Laboring Mom
- * OB equipment- fetal monitor (Fluke)
- * Standardized Patient

Stage 2

- * Delivering Mom
- * SP and task trainer

This slide illustrates the equipment and scenarios for Stage 2. On the left, a 2x2 grid of photos shows a manikin in a hospital bed being attended to by a healthcare provider. On the right, there are images of a pelvic trainer, a red fundus assessment pad, and a baby doll.

Stage 3

- * 2 hours Post-Partum
- * Normal assessment of Mom and baby
- * Full Size Manikin with Fundus Assessment-Sim Pad
- * Baby doll

This slide illustrates the equipment and scenarios for Stage 3. On the left, there are images of a pelvic trainer, a fundus assessment pad, and a baby doll. On the right, a 2x2 grid of photos shows a healthcare provider performing a fundus assessment on a manikin in a hospital bed.

Stage 4

- * 4 hrs Post Partum Hemorrhage
- Full size Manikin (same as Stage 3)

This slide illustrates the equipment and scenarios for Stage 4. On the left, there is a graphic of a large red blood splatter. On the right, a 2x2 grid of photos shows a healthcare provider performing a fundus assessment on a manikin in a hospital bed.

Debriefing

- * After each stage: Bedside discussion and large group debrief with actors and observers
- * Application of Theory
- * Feedback
- * Reflection

EHR

- * Prep
- * Interventions(MAR/Orders)
- * Documentation

Leveled for PN Students

- * LPN's role in OB
- * Stage 3 and 4
- * Stage 4 Identify when to contact RN

Questions?

- * Fill out the survey to obtain your Certificate of Attendance
